Alloy Welding continues to serve Bristol

Alloy Welding and Manufacturing is a third generation, family-owned business that has been in Bristol since 1937. “We’ve been around for so long, we have a lot of experience,” said Darren Frechette, president and general manager of the company. “We stand behind our work. If there’s something that’s not right, we make it right.”

Located 233 Riverside Ave., Alloy Welding and Manufacturing works with steel, stainless steel, aluminum, cast iron, copper, titanium and other metals, offering custom services, such as metal fabrication or welding, and water jet cutting. Water jet cutting can produce parts in three hours that would have taken three days the old way.

The company does work out of a 14,000-square-foot facility, which is capable of hoisting up to five tons and has an extensive inventory of steel, stainless steel and aluminum. Alloy Welding also does work from the field if a job requires it. “We do small jobs and big jobs,” said Frechette, who grew up around the business.

While the company does larger jobs for businesses, it also does a lot of work for individuals such as inventors, who have developed a prototype and need to know if a product will work, as well as homeowners.

“We do a lot of prototypes for inventors,” Frechette said. He added that the company can do repair work on items for homeowners, many of whom may not have even thought to get the item fixed. These can include just about anything made of aluminum or another metal, including railings, light fixtures, tools, patio furniture, bed frames, trailers, kitchen utensils, cast iron fences and more. “The sky is the limit,” Frechette said.

Those interested can either drop an item off at Alloy Welding and Manufacturing or call 860-582-3638 between the hours of 7 a.m. and 4:30 p.m.

“We don’t have an automated computer,” Frechette said. “You actually talk to someone right away. I think personal service is important.”

“Customers may not even know exactly what they want,” he continued. “We can walk them through jobs.”
